

Made for Motion

EVOLASTIC®

Highly flexible couplings

ktr.com

Fast, easy and reliable - with the product finder and our online tools

The product finder allows you to get to the suitable product in just a few steps. For this purpose either make use of the search function if you already know the product or use the full-text search which guides you to the requested result via various product-specific filters. Our selection tools speed up the detailed product selection. Few tech-

nical data suffice to rapidly find the right product for your application in the configurators - without having to browse catalogues lengthily.

Online tools

EVOLASTIC®

Highly flexible couplings

Description of product and application

The EVOLASTIC® is a highly flexible, non-slip and backlash-free shaft and flange coupling for flexible use in a large number of main and auxiliary drives in mechanical and plant engineering.

Subject to the elastomer element pre-stressed to pressure, the coupling is able to reduce torsional vibrations in the drive train and absorb overload shocks smoothly. Structure-borne noise is damped efficiently. At the same time it offsets misalignment above average in three dimensions (axially, radially and angularly).

The key component of this series is a vulcanised, circularly closed elastomer element made of natural rubber (WN, SN, MN, up to 90 °C) or for higher temperatures made of synthetical EPDM material (WE, SE, ME, up to 110 °C). The various kinds of rubber hardness cover one application and torque range per size.

The basic variants distinguish between directly screwed types and pluggable types. They cover all practical mounting conditions ranging from a finished individual component through hub/hub and flange/hub applications to the driving shaft. Apart from that the product portfolio allows for highly individual and flexible mounting options, tailor-made for the special application.

¹⁾ T_{KN} Torque that can be constantly transmitted over the entire speed range.
T_{Kmax} Transient torque peaks (e. g. resonance passage), max. 100,000 load alternation pulsating / 50,000 load alternation vibratory
T_{Kmax1} Torque loads rarely, max. 1,000 load alternation
For selection consider DIN 740 part II (operating factor, temperature factor), parameters for an ambient temperature of 20 °C.
²⁾ Higher strength on request.

Types

Types screwed axially	
E	Elastomer + set of screws
EH	Elastomer + hub (drive)
E2H	Elastomer + two hubs (driving and driven side)
EFH	Elastomer + flange (drive) + hub (driven side)
D2H	Two elastomers + intermediate shaft + two hubs
DFH	Two elastomers + intermediate shaft + flange and hub

Types plugged in axially	
EP	Elastomer + locking pin
EHP	Elastomer + hub (drive), pluggable
E2HP	Elastomer + two hubs (driving and driven side), pluggable
EFHP	Elastomer + flange (drive) + hub (driven side) pluggable

EVOLASTIC®

Highly flexible couplings

Types of hubs

Type 1.0
Hub with feather keyway and setscrew

Type 3.0
Hub with spline bore

Type 3.1
Clamping hub N with spline bore

Other hub connections on request.

Examples:

- Slotted clamping hub
- Clamping ring hub
- taper or cylindrical press fit
- split hub

Displacements / Displacement stiffness

EVOLASTIC® size	12	24	48	60	86	125	200	280	360	560

	Max. ¹⁾	6.0	6.0	4.0	6.0	4.0	6.0	4.0	4.0	4.0

¹⁾ With assembly for a short time resp. rarely with downtime or start-up operation as well as exceptional load conditions.

The radial and angular displacement of a coupling element refers to an operating speed of 1,500 RPM. Following the graph the permissible operating displacement increases with lower speed or reduces with rising speed by the factor f_{rpm} . The combination of radial and angular displacement in an application is divided up as a percentage. The permissible displacement refers to the total of alignment and operating displacement.

¹⁾ With max. bore

Delivery condition:

EVOLASTIC® couplings type EP are supplied with a mounting kit consisting of cap screws, screw locking washers, locking pins and positioning sleeves. With the connection design make sure sufficient screw-in depth. For the locking pin provide for an adhesive (e. g. Loctite® 243).

Size	Pin		Cap screw radial DIN EN ISO 4762 - 12.9

Certificates and Approvals

Being one of the first companies in the field of drive technology, KTR was certified in accordance with DIN EN ISO 9001 already in 1993, including the plants in Poland, China, India and USA.

Currently KTR products have been approved by numerous internationally renowned societies for standardization and classification. Individual approvals by other societies can be implemented on request without fail.

Original approval date:

17.05.2011

Date of the audit:

Date of next recertification: 17.06.2008

Valid until:

Legend of pictograms

Torsionally rigid

Light-weight

Maintenance-free

Torsionally flexible

Axial compensation

Protected against corrosion

Highly flexible

Angular compensation

Electrically insulating

Damping vibrations

Radial compensation

Maximum speed

Axial plug-in

Shiftable at standstill

No eddy current losses

Consider shaft distance

Double-cardanic

Torque limiter slipping

Relatively short shaft distance

Radial disassembly
Ease of service

Torque limiter with synchronous ratching

Maximum operating temperature

Standard drop-out center length

Torque limiter with idle rotation type

High speeds

Available in accordance with API

Hardened surface

Backlash-free

Complying with ATEX
For details refer to our ATEX leaflet

Accuracy X %

Shear type, separating, slipping

Certified in accordance with ABS

Consider axial displacement

Additional features compared to standard version
